EDUCATION

Coimbatore Institute of Technology
Bachelor of Engineering in Computer Science

May 2026
CGPA: 8.86

SKILLS

Programming Languages: Python, C, Java, JavaScript, R
Frontend: HTML, CSS, Tailwind CSS, Streamlit
Web Frameworks: Django, Flask, Fast API, React, AngularJs
Database: Postgres, MySQL, SQLite3
AI Tools: Langchain, Pinecone, Hugging Face
Version Control: Git, GitHub, GitLab

EXPERIENCE

Sálim Ali Centre for Ornithology and Natural History (SACON)

January 2025

Software Engineering Intern

Coimbatore, India

- Developed a Machine Learning approach to Habitat Suitability Analysis for Hornbills using auto-encoders and geospatial visualization techniques.
- Processed satellite and field data to create interactive maps, identifying priority conservation areas for biodiversity preservation.
- Integrated computational methods with ecological research, demonstrating a multidisciplinary approach to conservation challenges.

CloudTel Solutions

July 2024 – August 2024

SDE Intern

Remote

- Streamlined team workflows by introducing Git best practices, reducing integration challenges and enhancing collaboration.
- Designed and developed a customer-centric ticketing platform using Django, improving support efficiency and user satisfaction.
- Implemented AI-driven solutions with LangChain and LLaMA2, transforming complex data into actionable insights for business growth.

PROJECTS

Hornbill-Habitat-Analysis-ML | *Scikit-learn, Autoencoders, GeoPandas, GEE* | [Link](#)

March 2025

- Built a machine learning pipeline combining clustering and autoencoders to model habitat suitability of hornbill species.
- Used ecological, telemetry, and climate data to identify core habitat zones and movement behavior.
- Visualized spatial patterns using Plotly and GeoPandas; integrated satellite layers from Google Earth Engine.
- Streamlined spatial preprocessing and feature engineering to support large-scale, multi-species analysis.

Fun-Gram | *Vite, React, Chakra-UI, Firebase* | [Link](#)

January 2025

- Built an Instagram-style social media app with real-time features like posting, liking, and commenting.
- Integrated Firebase Authentication, Firestore database, and Storage for seamless backend operations.
- Crafted a clean, responsive UI using Chakra UI, ensuring optimized layout across mobile and desktop.
- Deployed the application on Firebase Hosting for stable performance and fast global delivery.

Socio-API | *Python, FastAPI, SQLAlchemy, Alembic, PostgreSQL* | [Link](#)

September 2024

- Developed a robust social media API that allows users to manage multiple accounts, posts, and user profiles efficiently.
- Implemented secure authentication and authorization workflows to safeguard user data and access control.
- Utilized SQLAlchemy and Alembic to streamline database interactions and support scalable schema management.

Easy-Kart | *HTML, CSS, JavaScript, Django, Stripe* | [Link](#)

July 2024

- Built a full-stack e-commerce website featuring product listings, shopping cart, and secure checkout with Stripe integration.
- Enabled users to register, manage profiles, list products for sale, and make purchases through the platform.
- Designed and deployed a user-friendly interface with smooth navigation and essential e-commerce functionalities.

CERTIFICATIONS

Complete Python Bootcamp ([Link](#))

July 2024

Master LangChain, OpenAI, and Llama2 ([Link](#))

July 2024
